

# GL-5 Heavy-Duty Automotive Gear Oil

## Applications

KunLun GL-5 is designed for lubrication of all types of enclosed gears, including worm gears, operating under high loads and temperatures. It is recommended for differentials, final drives, manual transmissions and gear boxes for all passenger cars, trucks, farm, construction, off-highway and industrial equipment.

## Features

- Exceeds requirements of API GL-5 service classification.
- Minimizes metal to metal gear tooth contact even under shock loading
- Possesses a high viscosity index, low pour point, high load carrying capacity and very low frictional characteristics.
- Outstanding thermal and oxidation stability, keeping gear surface clean against high temperature and heavy duty.
